

Dear Susan,

On behalf of the Stanford University School of Medicine Clinical Science, Technology and Medicine Summer Internship Program, we welcome < insert student's first name > to the [first day of our exceptional SASI programming](#).

In the coming days, students will have an opportunity to learn how to tackle the challenges posed by COVID-19 through collaboration, innovation and compassion. As the world faces a public health crisis, it is more important than ever for our participants to further develop the critical thinking skills and empathy that will prepare them for compassionate careers in science, medicine and technology.

They will do this as they work on their capstone projects, which we discussed today, and will expand their knowledge through presentations by those on the forefront of combatting COVID-19's spread. They will learn from and be mentored by world-class Stanford clinicians. We hope you look forward to these next two weeks and what they will offer your son or daughter as much as we do.

We will send you a daily email as a recap of the day's learning. We hope you enjoy these views into what your student is learning. As always, if you have any questions, feel free to let us know at summermed@stanford.edu.

Sincerely,

Bassam Kadry, MD
Associate Director, Leadership

Larry Chu, MD
Executive Director

Amy Price, DPhil (Oxon)
Associate Director
